Canvas Office Landscape®

## Canvas Office Landscape

Designed by Douglas Ball, Joey Ruiters, Jeffrey Bernett, and Nicholas Dodziuk

At any point in the workday, employees could be performing a number of different activities. That's why a flexible, adaptive workspace is so necessary. Canvas Office Landscape better supports the many types of work happening in today's offices, whether that's task-oriented at a desk, casual chats with colleagues, or getting

comfortable in a long meeting. With Canvas, you get a concise set of elements that can be combined in numerous ways to accommodate these activities. What's more, all of these elements are cohesive, so they work in harmony with each other. Your office looks good, and people have everything they need to do their work.

## Design Story

In the decades following the introduction of the Action Office® System, our thinking, informed by our research into the changing nature of work, has continued to evolve. So have our solutions. Today our customers need comprehensive, versatile furniture systems to outfit the entire office, and accommodate the many different ways people work.

Canvas fulfills this need with a kit of parts that suit many needs—from private offices to group space to open layouts. The design benefits from the input of a variety of designers along the way, drawing on existing systems designed by Doug Ball and Joey Ruiters, and new designs from Jeffrey Bernett and Nicholas Dodziuk of the New York firm, Consultants for Design Strategy.

Bernett and Dodziuk understood that to achieve a workable simplicity, you first have to understand complexity. “The best products anticipate and define future needs and behaviors,” says Bernett, “and ultimately promote balance, harmony, and simplification of our complicated lives.”

**Industry-Leading in Scope**

Canvas Office Landscape addresses work activities across the office—from individual, focused work to collaborative interactions. Whatever the nature of the work, Canvas has the platform of products to give people what they need to excel at what they do.

## Highly Adaptive in Performance

We designed Canvas to be adaptive. At its core is a kit of parts that combine interchangeably, giving organizations a powerful tool to manage change. Products used in one area of the floorplate today can migrate to another tomorrow, promoting reuse.

**Beautifully Cohesive in Design**

Canvas lets organizations create diverse settings that share the same design language. Attention to detail, clean lines, and a unified aesthetic all contribute to an appearance that complements a mix of products in one space or across the office.

## **Design for the Environment**
